1033650rar.Oral surgery Oral surgery  
refers to a particular range of dental  
procedures aimed at the treatment of  
the oral and related structures. Oral  
surgery is also known as "beauty  
surgery", as the mouth can be seen  
directly and the procedures carried out  
are usually very visible. Oral surgery is  
often, but not always, performed by

---

dentists. Oral surgery includes but is not limited to the following subspecialties: Ligature Oral rehabilitation Periodontology Restorative dentistry Orthodontics Pediatric dentistry Extraction is one of the most common of oral surgical procedures. Other types of oral surgery include: Endodontics Genioplasty Gingivectomy Gingivoplasty Guided tissue regeneration Open reduction and internal fixation Orthodontics Pediatric dentistry Periodontology Periosteal bone grafting Prosthodontics Oral surgery Oral surgery, along with dental general

---

surgery (i.e. Facial plastic surgery), is the most popular surgical specialty in dentistry. Oral surgeons do not have the same restrictions as general surgeons with regard to dissection and incision. Oral surgeons are generally limited to suturing mucosa to mucosa or submucosa, and are not allowed to enter subcutaneous tissue. Oral surgery is one of the most commonly performed surgical procedures in dentistry. In 1998, more than 1.5 million patients in the United States were treated by oral surgeons, accounting for more than 15% of all surgical cases in dentistry. Oral and

---

maxillofacial surgery is one of the most active surgical specialties, with more than 1,000 oral and maxillofacial surgeons practicing in the U.S.

Approximately 60,000 to 70,000 new cases of oral and maxillofacial surgery are performed each year. Oral and maxillofacial surgery is widely represented among the dental schools and dental faculties in the U.S.

Approximately 80% of U.S. dental schools (with over 300 schools) offer
